

Care Everywhere Authorizations and Statuses

Care Everywhere is an electronic record sharing application. This allows Planned Parenthood to share and receive your records at the point of care to help expedite your care.

Depending on your authorization and status types, outside healthcare organizations and Planned Parenthood can share and receive records. Once shared, records cannot be retracted.

You do not have to participate in **Care Everywhere**. If you would like to not participate, please let your local Planned Parenthood health center know, and they can set your authorization to Not Sharing or Receiving.

Point of Care Authorization (Daily)

- This is the default authorization type when your chart is created in Epic.
- For outside healthcare organizations to access your records, you must sign an authorization every time.
- This authorization will expire at the specific organization after one day.
- Outside healthcare organizations will see that you are a patient at Planned Parenthood and your demographic information, but they **cannot** see any of your medical information until you sign the authorization giving them permission.
- This allows you to pick and choose who can access your records and when!

Prospective Authorization (Yearly)

- This is a yearly authorization that allows outside healthcare organizations to receive your records from Planned Parenthood without a daily signature.
- This can be completed at the front desk of a Planned Parenthood health center, or through your MyChart.
- To no longer participate in this, you must call your local health center or send a message through MyChart to request it to be changed.

Care Everywhere Authorizations and Statuses

Care Everywhere has two types of statuses and multiple combinations to allow you to have more control how your records are shared.

If you do not want to participate in Care Everywhere we would set your statuses to **Not Sharing/Not Receiving**.

Sharing/Not Sharing

- This Status allows Planned Parenthood to push out your information to outside healthcare organizations.
- Some encounters can be marked as sensitive to restrict the information that is sent out, however, some information like lab results, medications, and problem list information will still be shared.
- NOT Sharing will not allow Planned Parenthood to share any records to outside healthcare organizations.

Receiving/Not Receiving

- This status allows Planned Parenthood to receive your records from outside healthcare organizations.
- This allows us to get a full view of your health and to ensure we are helping you make the safest and best decisions.
- NOT Receiving will not allow Planned Parenthood to receive any information from any outside healthcare organizations.
